

FOR IMMEDIATE RELEASE

Technipaq Celebrates 30 Years of Innovative Medical Packaging Solutions

Crystal Lake, IL—August 28, 2014—Technipaq Inc., one of the leading manufacturers of flexible and sterilizable packaging solutions for the medical device, diagnostic, healthcare, food and pharmaceutical industries, proudly celebrates its 30th anniversary this month.

Founded by Phil Rosenberg in 1984 with the goal of providing more innovative and responsive packaging solutions for the medical device and healthcare industries, Technipaq began with a single product line and one customer. Today the company delivers more than 10,000 different product combinations to more than 1250 customers across several industry sectors—impressively this includes the original customer the company started with 30 years ago this month.

“Our success is a direct reflection upon the quality of our people and partners, and the consistently superior services and solutions we are known for delivering to our customers,” said Brian Rosenberg, Vice President of Sales & Marketing. “The steadfast focus and attention to detail we put into our work is perhaps matched only by the time we dedicate to understanding the immediate and long-term needs of our customers and industry.”

Technipaq has grown tremendously over the past 30 years, in large part due to its unwavering commitment to customer service and focus on product innovation. By continuously reinvesting in its people and infrastructure, the company has stayed at the forefront of the industry, helping pioneer advancements in both process and product, such as the sealing of uncoated Tyvek peel pouches and introduction of the header bag format.

The company is not just able to handle the most complex and customized of packaging orders, but quickly and effortlessly scale operations to accommodate quantities at both ends of the spectrum—a unique value proposition that its customers regularly cite as a key reason behind the longevity of their relationships.

“We do not believe there is anyone in the industry today capable of turning around an order faster, or operating under shorter lead times, than Technipaq,” noted Rosenberg. “Our responsiveness of service, flexibility of operations, and quality of product are what’s helped cement our reputation over the years.”

This is evidenced by the company’s consistent expansion. Today its more than 150 employees operate across two facilities comprising more than 100,000 square-feet of manufacturing and warehousing space. Technipaq’s customer base has also evolved to include food and pharmaceutical customers.

“Whether for the military, medical facilities or food manufacturers, the products we package are directly responsible for helping save lives and/or prolong the quality of life for people in our community and around the world,” said Rosenberg. “With this comes an immense professional and personal responsibility, as well as a genuine sense of pride in the work we do and the role our business plays in society—a role that extends back 30 years and counting.”

###

Technipaq is an ISO 9001/13485 certified manufacturer of high quality, flexible packaging solutions for the healthcare, medical device, diagnostic, food and pharmaceutical industries. With more than 100,000 square-feet of manufacturing and warehouse space, the company is capable of laminating, printing, slitting, sheeting, die-cutting, and fabricating flexible sterilizable bags and pouches designed to the most demanding specifications. A registered vendor of Tyvek for medical packaging, Technipaq maintains an extensive selection of custom stock laminates, manufactured in both peel-able and fusion seal format, and specializes in converting Tyvek surgical papers, foils and films into high-barrier ETO, radiation and autoclave packaging. Since 1984 Technipaq has remained a leading one-stop supplier of innovative packaging solutions with the shortest lead times for custom orders. Visit www.technipaq.com to learn more.
